# VideoProc Converter AI

## An AI-generative Video Enhancer and Converter software

This program is the optimal solution for those who want to enhance old/SD/ low-quality / low-resolution videos & photos; create smoother video with AI-generated realistic higher FPS; convert large/4K/HD/DVD video, edit, compress, download, and record with GPU acceleration.

System Requirements for Utilizing AI Tools:
◆ Windows OS: Microsoft Windows 7/8/8.1/10/11 or later (32-bit and 64-bit versions supported)
 Hard Disk Space: 1GB
 RAM: 2GB (Minimum)
 Graphic: please make sure your graphic card is compatible with Vulkan 1.2.x or later.

◆ AI features for Mac is coming soon.

Note: AI-driven video enhancement algorithms often demand significant computational power, exceeding the requirements of standard video conversion and processing tasks. VideoProc Converter takes full advantage of GPU acceleration, empowering AI models to execute more computations per unit of time. This leads to faster processing times when compared to similar tools available in the market. Please be aware that processing times can vary depending on your computer's performance and the capabilities of your graphics card.

# VideoProc Converter AI Super Resolution

Super Resolution in VideoProc is capable of restoring and enhancing blurry, noisy, grainy, old, and low-quality/resolution videos, DVDs and photos. It can scale up media by 2X/3X/4X, and enlarge it to HD/4K/8K at most while delivering a natural result without noticeable artifacts and detail loss. Powered by up-to-date and well-trained AI models, the AI-generative video upscaling technology is specially made for reality and anime videos and images.

## Why Choose VideoProc?

- Faster speed. It is built with real-time Super Resolution, dynamically adjusts the GPU memory footprint to achieve the best efficiency.
- Be able to deal with poor quality media while retaining the best video quality. e.g. classic MVs/films, antiquated camera footage, vintage DVD/VHS/DV recordings, Blu-ray video, 1080i video, or analog video, screen records, online streaming, videos & images generated with MidJourney, DALL-E, etc.
- Enlarge by 400% max, even 360p videos to 4K. Some enhancers only support 200% .
- Optimized even for dynamic, high-speed sports footage, high fps, or high-motion footage.
- Keep details of skins, fabrics, faces, bodies, and edges.

# VideoProc Converter *AI* — Frame Interpolation

**AI Trained**   **Avoid Artifacts**   **Easy to use**   **GPU Acceleration**

Non-AI Method: Smearing | VideoProc Converter AI: Smooth

Anniversary
Family Memories

Concert MTV
Stage Play

Wildlife
Documentary

Old DVDs
Classic Movies

Daily Vlogs
Hobby Videos

This Frame Interpolation tool uses deep learning to boost low-FPS video to high FPS. Adding 2x-5x new frames into the source video, it helps everyone to create 20x super smooth slow-mo, revive old footage to 4K 60FPS, unify mixed frame rate for post-production, and can be combined with other AI art tools to create morphing effects.

### Why Choose VideoProc?

- Support detecting dramatic scene change, and offer the option to skip interpolation when two adjacent frames are in different scenes, thus avoiding unnatural artifacts.
- Add visual smoothness to your cherished footages, like family memories. Create epic slow-motion like magic, instead of buy a high-speed camera.
- Tailored for Action and sports videos, travel vlogs, music videos, event recordings, creating smooth slow motion, etc.

# VideoProc Converter AI Stabilization

The AI stabilization tool makes it easy to eliminate unwanted shaky video clips from your GoPro, phone, drone, and handheld camera with GPU-accelerated speed, controllable cropping ratios, and precise fine-tuning. It tries to keep highest balance among quality, speed and crop ratio. To meet users' different needs, it offers four presets: Best Stability,  Fastest, Balanced and Minimum Crop.  This tool also enables you to change Border Color and Crop Type. Tailored for equipment jitter, motion shake, handheld shake, shadow jitter, and low-light wobbles.

## Why Choose VideoProc?

- Correct wobbling in vertical and horizontal videos, akin to tripod usage.
- Maintain different settings for various shaky videos when batch stabilizing.
- Preview original and stabilized videos in real-time after adjust parameters.
- Choose video tracks from multitrack videos and adjust GOP for further editing.
- Focus on stabilizing videos only, and avoid effects conflicts that may arise in some editing software.
